YOUR NEEDS, **OUR** CHEMISTRY

OXIFLOW® S 6800

Rheology modifier that enhances **sulfate-free formulas with softness and flow**, improving user experience without compromising performance.

It delivers the gentle, luxurious feel today's consumers expect, supporting **clean beauty** while maintaining the quality of **premium care**.

AN INDISPENSABLE MEMBER OF

INDORAMA
VENTURES

OXIFLOW® S 6800

An associative rheology modifier which offers outstanding performance, developed to promote efficient thickening for challenge surfactant-based systems, especially salt and sulfate-free formulations.

OXIFLOW® S 6800 is an excellent choice as it provides, besides viscosity and flow behavior, the achievement of many other key functional and sensory features.

PRODUCT BENEFITS

Efficient thickening

Cold-processable

Mild and non-irritating

Preservative-free

No neutralization required

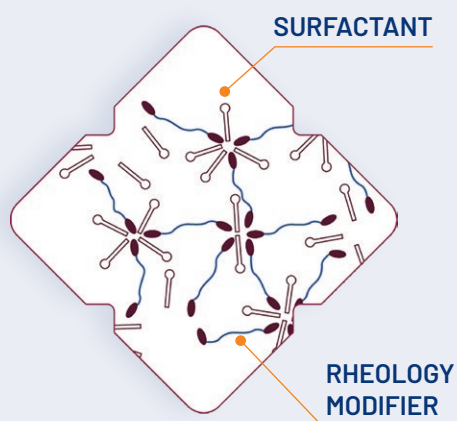

Suitable for salt and sulfate-free formulations

Delivers high transparency in formulations

Co-emulsifier for sunscreen formulations

Associative Rheology Modifier

Hydrophobic groups associate with each other and with other hydrophobic groups present in the formulation (e.g. nonpolar portion of surfactants and micelles)

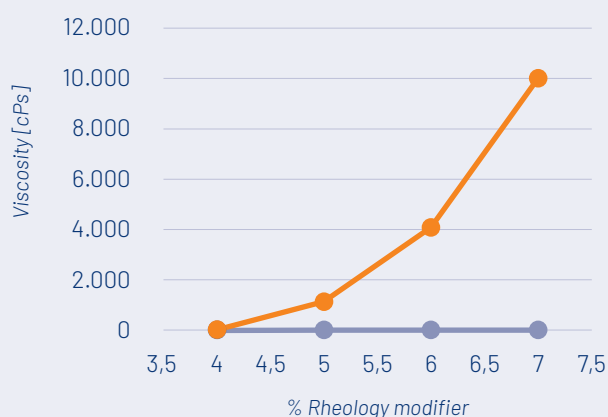

This associative mechanism forms a network structure resulting in increased viscosity of the formulation

Thickening Performance

SULFATE FREE

Chassis: 15 wt% total actives (SS:CAPB)

- OXIFLOW® S 6800
- Sodium chloride

BIOSURFACTANTS

Chassis: 13 wt% total actives (Sophorolipid:CAPB:Sorbitan Oleate)

- 4% OXIFLOW® S 6800
